

The background of the entire image is a deep space scene. It features a large, detailed view of the moon's surface in the lower half, showing numerous craters and a prominent dark lunar mare. Above the moon, several other celestial bodies are visible, including a large planet with a ring system (resembling Saturn) and various moons or smaller planets, all set against a black starry sky.

ETIHERplus

*Join the ultimate
energy-saver package!*

e-limitless

Future oriented “no-waste” tool.

It goes beyond the traditional frequency drivers, allowing you:

- ✓ Avoid peak of consumption while starting up.
- ✓ Avoid off-loads.
- ✓ Avoid exceeding 100% power consumption.
- ✓ Limitless regulation.
- ✓ Limitless (dis)connection. Net ↔ VSD.

* Graph data calculated for one unit of HORIZON 2000

e-ntelligent

Synchronize your compressors.

It allows the coordination of multiple compressors against a defined pressure set point. Therefore, the e-ntelligent system will find the perfect balance between the loading running time from all compressors and the speed of them. Hence, downsizing the energy consumption from the net.

- ✓ Move from static to dynamic machine control.
- ✓ Adjust your consumption to your production.
- ✓ Auto management of compressors running hours.

* Graph data calculated for three units of HORIZON 2000

e-wide

Regulate beyond limits.

This system will provide you a wide regulation range from 20% to 100% of the compressor capacity. When running at minimum speed and loading at 50%, it will be able to accelerate depending on the given signal.

- ✓ Smooth regulation.
- ✓ Avoid off-loads.
- ✓ Skip air-flow jumps.
- ✓ 0-50-100%.

CONSUMPTION

* Graph data calculated for one unit of HORIZON 2000

e-control

Empower your 4.0 diagnosis.

This tool allows to find out more accurately the real wearing of the spare parts, based on a sensor-parametrized technology which communicates either through the PLC or remotely. This innovation has been created to go a step ahead the preventive maintenance and leads to arrange the service according with your calendar.

- ✓ Optimize your installed equipment.
Balance your service cycle.
- ✓ Full sensor equipped compressor.
- ✓ Reach to a quicker diagnosis.
- ✓ Automatic spares system.

In the late 19th century, the ether was the postulated medium for the propagation of energy. It was invoked to explain the ability of the apparently wave-based energy to propagate through empty space, something that waves should not be able to do.

The assumption of a spatial plenum of ether, rather than a spatial vacuum, provided the theoretical medium that was required by wave theories of energy. The theory was dismissed in the beginning of the 20th century.

Owing to the latest new and e-asy technology to approach your company into the e-4.0 industry world, ABC's R&D specific department has developed ETHERPLUS package with the best advantages in the market.

Join the ETHERPLUS ultimate package and get the best energy saving tools and go a step ahead on the preventive maintenance!
